

**PRESS RELEASE****Ascent Healthcare Solutions – Leading Independent Re-Processor of Medical Devices Implements RFgen Automated Data Collection Solution**

EL DORADO HILLS, CA – September 10, 2007 – The DataMAX Software Group, Inc., a leader in Automated Data Collection Software with over 2,000+ installations worldwide, announced **Ascent Healthcare Solutions selection of the RFgen JD Edwards Integration Suite** for their Oracle based data collection system.

Ascent Healthcare Solutions is a leading independent re-processor of medical devices for top hospitals and healthcare providers throughout North America. Ascent ships 3000-4000 boxes per day out of two warehouses totaling 20,000 square feet, where 24/7 inventory processing and management is a core business function. Since their inception, Ascent has safely reprocessed in excess of 50 million medical devices, eliminating in excess of 10,000 tons of waste from local landfills, and saving over \$500 million from their costs by reprocessing and recycling medical products they would otherwise have needlessly thrown away.

In order to support the required FDA protocols and their growing business, Ascent needed an automated data collection (ADC) system for inventory management - a system that would allow for more precise and timely warehouse management, asset tracking, delivery, sales, inventory management and other business processes. With limited resources, funds and the time to implement, Ascent needed a functional system that did not require a great deal of front-end customization, so the choice was easy.

DataMAX's RFgen Software simplified the entire implementation process, enabling consultants to bring highly functional applications into production in a short time frame and at a reduced cost. Built-in application features such as high-availability support, off-line inventory, and license plating that have all been pre-defined, tested and fully validated – allowed users during the requirements phase to focus on simplifying their existing process workflows, implement industry best practices, improve employee productivity, and generate greater ROI from their current JD Edwards system.

About the DataMAX Software Group, Inc.

In business since 1983, software from the DataMAX Group has a proven track record of success when it comes to designing, implementing and deploying wireless and mobile solutions. RFgen enabled solutions can be found in over half of all Fortune 100 manufacturing companies as well as in numerous mid-level and smaller enterprises. DataMAX's flagship product, the RFgen Framework, is a system for delivering wireless and mobile automated data capture solutions. Whether the target is distribution, manufacturing, retail, agriculture, pharmaceuticals, healthcare, or something else, RFgen is flexible enough to meet your unique requirements. A Certified Oracle, SAP and Microsoft Partner, DataMAX is a leading provider of Automated Data Collection Software Solutions, Transaction Suites, and Services to major corporations in the United States, Europe, and Asia. RFgen Software is installed and supported worldwide by 125+ associated resellers and partners.
