Omron – Selects RFgen Data Collection for expanding their JD Edwards Inventory and Manufacturing Management

EL DORADO HILLS, CA – October 3, 2008 – The DataMAX Software Group, Inc., a leader in Automated Data Collection Software with over 2,000+ installations worldwide, announced Omron's decision to purchase and implement RFgen for their inventory and manufacturing management solution. RFgen's JD Edwards Certified Integration Data Collection Software will propel Omron's JD Edwards system to a new level, fully automating their processes which are run by a full Warehouse Management system in their JD Edwards EnterpriseOne 8.12 system.

Specifically, Omron has chosen RFgen to automate their data collection for receiving, put away, and shipping. In addition to enabling mobile inventory tracking via Windows Mobile Handhelds, RFgen has built a unique integration solution to a Carousel picking system provided by ASR systems. RFgen has made it possible to execute all transactions through a single interface keeping all inventory in sync with JD Edwards while streamlining the data collection process to be 20% more efficient. The main benefits of RFgen that appealed to Omron was the flexibility of developing a data collection solution which ran with and without the use of their new Carousel picking system.

A pioneer in the field of electrical / electronic control components, Omron is one of the world's premier manufacturers of reliable control products for industrial automation and electronic control. Omron Canada, Inc. is part of the Omron global family dedicated to providing top quality components including relays, timers, counters, switches, temperature and process controllers, sensors, HMIs, motion control and PLCs.
