Symbion Health's Consumer Division – Chooses RFgen Data Collection to fully automate warehouse processes integrating with JD Edwards

EL DORADO HILLS, CA – May 30, 2008 – The DataMAX Software Group, Inc., a leader in Wireless Automated Data Collection Software with over 2,000+ installations worldwide, announced Symbion Health's decision to purchase and implement RFgen to run the warehouse management operations at their key distribution center in Brisbane, Australia for their Consumer product division. RFgen will allow them to fully automate their processes which are run by a full Warehouse Management system in their JD Edwards EnterpriseOne system.

Symbion Health, recognized as a world-class wellness provider, offers trusted diagnostic and wellness services and products to improve or sustain health. Symbion operates under 5 divisions including Pathology, Medical Centers, Radiology, Pharmacy Services and lastly their Consumer division which is the leading provider of nutraceuticals, marketing more than 500 health related consumer products. The Symbion Consumer division currently maintains market leadership across Australia's combined grocer and pharmacy retail channels.

Specifically, Symbion Consumer division implemented RFgen to manage warehousing transactions with their QLD DC. Initially Symbion will implement stocking, replenishment, single picks and batch picks; as well as all inquiry functionality. Next they will implement RFgen at their manufacturing warehouse, expanding it downstream in their supply chain. The main benefits of RFgen that appealed to Symbion were the cost savings over the competitor product (dcLink by DSI); and secondly, the flexibility and ease of an RFgen implementation, as well as the benefit of easily developing customized solutions which made the entire project run smoothly as well as speed up the entire implementation process.

Following their go-live date, Symbion Health is completely satisfied with RFgen's Wireless and Mobile Data Collection. Obtaining complete ownership of the RFgen open source solution provided a value for their money unsurpassed by the competition. Symbion benefited from RFgen's Australian partner, Fusion5, who liberated them with their professional training, consulting and installation services.
